

OUR PARTNERS

From Phase 1

Covestro, a world-leading supplier of high-tech polymer materials, launched the project led to Full Circle Filament, and it remains a key partner. They blend the waste plastics that become our filament, as well as providing material testing. Covestro brings the scale and expertise necessary to support exponential growth.

Endeva helps create business models and ecosystems that include low-income people into value chains for mutual benefit. Endeva provides research, project management, & inclusive business expertise, as well as access to relevant networks.

The School of Global Studies is an academic initiative based in Bangkok, that delivers innovative programs around social enterprise, sustainability, and social innovation. SGS will act as an incubator for FCF as we go to market.

Filabot builds machines which recycle plastic into filament for use in 3D printers. They provide tech support on filament extrusion done with their machines.
