

OUR PARTNERS

From Phase 2

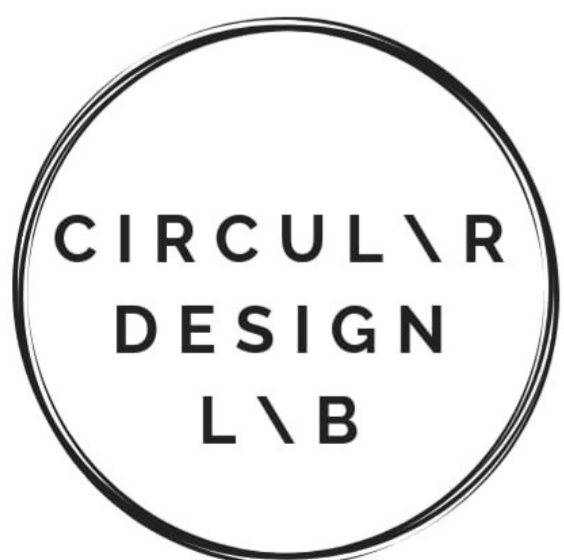

ImpactTech is the leading start-up accelerator empowering start-ups that create social & economic impact. They gave us the opportunity to engage in their 2018/2019 Thailand cohort and they've also connected us with mentors and potential funders.

SIIT is Thammasat University's material science lab. They focus on sustainable material development and they provide expertise and material testing. They're also extruding filament for product testing.

WeLearn is a social enterprise whose mission is to bring affordable, personalized, quality learning to youth in Thailand and other developing countries. They're helping with product testing and we're looking at running 3D printing labs for youth with them in the future.

The **Circular Design Lab** is an experiment that brings communities together to address environmental and social challenges. CDL will facilitate systems design workshops offering communities 3D printing as a tool to solve local challenges.
